Features and Description of Medical Services

Umirov Islam bek ¹

1. researcher

Abstract: The article describes in detail the characteristics, types and classification of medical services. Different aspects of medical services from other social services, as well as their role in ensuring public health are analyzed.

Keywords : medical service, medical care, socio-economic category, classification, characteristics.

1.Introductio

In the new Uzbekistan, honoring human dignity, protecting his life and health is the most priority direction of state policy. In this regard, it is important to create a quality and efficient medical service system for the population.

The rapid development of medical entrepreneurship in the Republic of Uzbekistan and the improvement of the legal framework defining the concepts of medical service and medical assistance led to the widespread approach to medical service as a socio-economic category. In particular, based on the tasks defined in the "New Uzbekistan Strategy", strengthening the health of the population, improving the quality of medical services and expanding the possibilities of their use are among the urgent tasks.

According to the World Health Organization (WHO), medical services are an indicator of rehabilitation and healthy lifestyle, which determine the physical, spiritual and social well-being of the population. The importance of medical services is that they serve to preserve human life and health, prevent and treat diseases, and improve the quality of life of the population.

A consumer of medical services is different from a consumer of other social services. Medical services have an absolute advantage over other social services, because these services are related to the most important thing - human life and health, so it is impossible to cancel their purchase.

In order to provide high-quality medical services to the population in the conditions of the new Uzbekistan, special attention is paid to reforming the health care system, strengthening the material and technical base of medical institutions, training and improving the skills of medical personnel, as well as developing the market of medical services. .

The subject of characteristics and description of medical services is wide-ranging and multifaceted, and the literature covering its various aspects is also diverse. During the research, scientific sources in the following directions were analyzed:

- 1. Legal basis:

Citation: Umirov I. Features and Description of Medical Services. Central Asian Journal of Innovations on Tourism Management and Finance 2024, 5(7), 424-428

Received: 23th Sept 2024

Revised: 23th Oct 2024

Accepted: 30th Oct 2024

- The Law of the Republic of Uzbekistan "On Health Care of Citizens" (1996) and the Law "On Medical Aid and Medical Services" (2019) defines the legal basis of service provision, the role and tasks of the state in the field of health care.
- The World Health Organization (WHO) Declaration on the "Health System" (1978) and "Health for the Ages" document (2000) are related to the human rights of health services. highlights the availability and makes recommendations to ensure their quality and availability.
- 2. Economic aspects:
 - "Human Development Report" by M. Pechchi (2003) analyzes the importance of medical services in the development of human capital and shows the impact of investments in health care on economic growth.
 - Uncertainty and the Economics of Health Care by J. Arrow (1963) examines the unique characteristics of the health care market, including the problems of information asymmetry and uncertainty.
- 3. Social aspects:
 - The role of medical services as mechanisms of social control and social integration is analyzed in "Social System" by T. Parsons (1951).
 - Medicine as a Profession by E. Friedson (1970) examines the impact of medical services on social stratification and inequality.
- 4. Medical aspects:
 - Clinical Epidemiology: A Framework for Medical Decision-Making by D. Sackett et al (1996) recommends the use of clinical epidemiology methods to assess and improve the quality of health care services.

Evidence-Based Medicine by A. McGinnis et al (2002) emphasizes the use of scientific evidence to select the most effective and safe methods of health care delivery.

The analysis of the above sources shows that the subject of medical services is at the intersection of various disciplines, including law, economics, sociology, and medicine. This requires a comprehensive study of this field and the integration of various scientific approaches.

In the article, the following methods were used to study the characteristics and description of medical services:

- **Analytical method:** In order to determine the nature, characteristics and types of medical services, to reveal their unique aspects, various literature, normative legal documents and statistical data were analyzed.
- **Comparative method :** A comparative analysis was conducted to determine how medical services differ from other social services.
- **Classification method:** By classifying medical services on the basis of various criteria, their diversity and versatility were shown.
- **Statistical method:** statistical data was used to determine trends in the development of medical services and evaluate their effectiveness.
- **Inductive and deductive methods :** Inductive and deductive methods were used to draw general conclusions from specific cases and to analyze specific cases from general laws. With the development of medical entrepreneurship in the Republic of Uzbekistan, the creation of the relevant legal framework defining the concept of medical service and medical assistance, the approach to medical service as a socio-economic category in the republic has become widespread. It should be noted that the concepts of "medical care" and "medical service" are defined in many international normative standards and documents. For example, the European Council on Patients' Rights Declaration on Patient Rights in Europe defines health care as medical, nursing or related services provided by health care providers. 'emphasized. According to the World Health Organization (WHO), medical services are an indicator of rehabilitation and healthy lifestyle, which determine the physical, spiritual and social well-being of the population. The priority aspect of social well-being known as "Social well-being" is important in the world health system.

1 - picture. Medical service features

The special feature of the medical service is that it is impossible to cancel it, the urgency of its provision, the availability of financial resources for its purchase when consuming it;

The producer of medical services has full information, and the consumer of services sometimes does not have information asymmetry (the professional ethics of doctors allow to directly convey information about some diseases to the patient does not).

Based on the analysis, health service can be considered as a type of activity of producers aimed at meeting the needs of people to restore their health and improve their quality of life. This approach is socio-economically important, reflects the complexity and complexity of health care and, like all services, focuses on meeting the needs of the patient and ensuring the well-being of life.

Based on the analysis of the scientific views of local and foreign scientists regarding the economic nature of medical services, the classification of services in the healthcare system can be completed as follows:

Table 1.

Classification of services in the health care system

No	Classification sign	Health storage in the system services types
1	Showing of service type according to	preventive , specialty within , organizational , statistical , diagnostic , treatment , centralized , transport, rehabilitation . This kind of services both public and private work producers by display can
2	Health storage segment according to	sanitary-hygienic , epidemiological , ambulatory, polyclinic , inpatient .
3	Service to show time according to	fast , urgent , planned .
4	Medicine employees qualified level according to	low , medium , high .
5	Innovativeness level according to	traditional , high technological ,
6	Invasiveness level by (penetration)	non-invasive , invasive .
7	Treatment protocol according to	Standardized and unstandardized (based , not based , error).
8	Final to the result reach for to go to time according to	To deadlines according to the deadlines suitable was not

9	Final to the result according to	adequate , partially adequate, inadequate .
10	Legal to standards to fit according to	performer functions appropriate , executor functions suitable non , error , indifferent (consumer to health defect deliverer or to his death reason divisor).
11	Population and society needs satisfy feature according to	Mutually to the exchange inclined , mutual to the filling suitable , independent .
12	Medical service to show conditions according to	At home showing , ambulatory polyclinic in terms of transportation in conditions (" fast help " , " sanitary aviation "), stationary in conditions , intensively therapy and resuscitation under conditions of quarantine conditions and etc.

G, N, I, J of the statistical classification of products (goods, works, services) of the Republic of Uzbekistan by types of economic activity, approved by the order of the State Statistics Committee of the Republic of Uzbekistan No. 73 dated August 27, 2020 , K, L, M, N, O, R, Q, R, and S sections according to the detailed list of types of services" according to the types of economic activity of the Republic of Uzbekistan (goods, works, services) in the statistical classifier of the following table 1.4, the types of services are distinguished. Section Q of the classification lists health and social services. In the first group "Hospital facilities services" scheme, services provided by manufacturers in specialized medical facilities are reflected, the main feature of which is the ability to perform medical procedures under appropriate conditions. These services require the availability of surgical intervention, beds and medical equipment for medical care, and a number of medicines for performing operations. Services in the field of medical practice and dentistry, unlike the first group, include specific types of services provided in offices and clinics whose capabilities and material-technical base do not allow for complex operations and resuscitation services. In the republic, this group of services is provided by state and private producers .

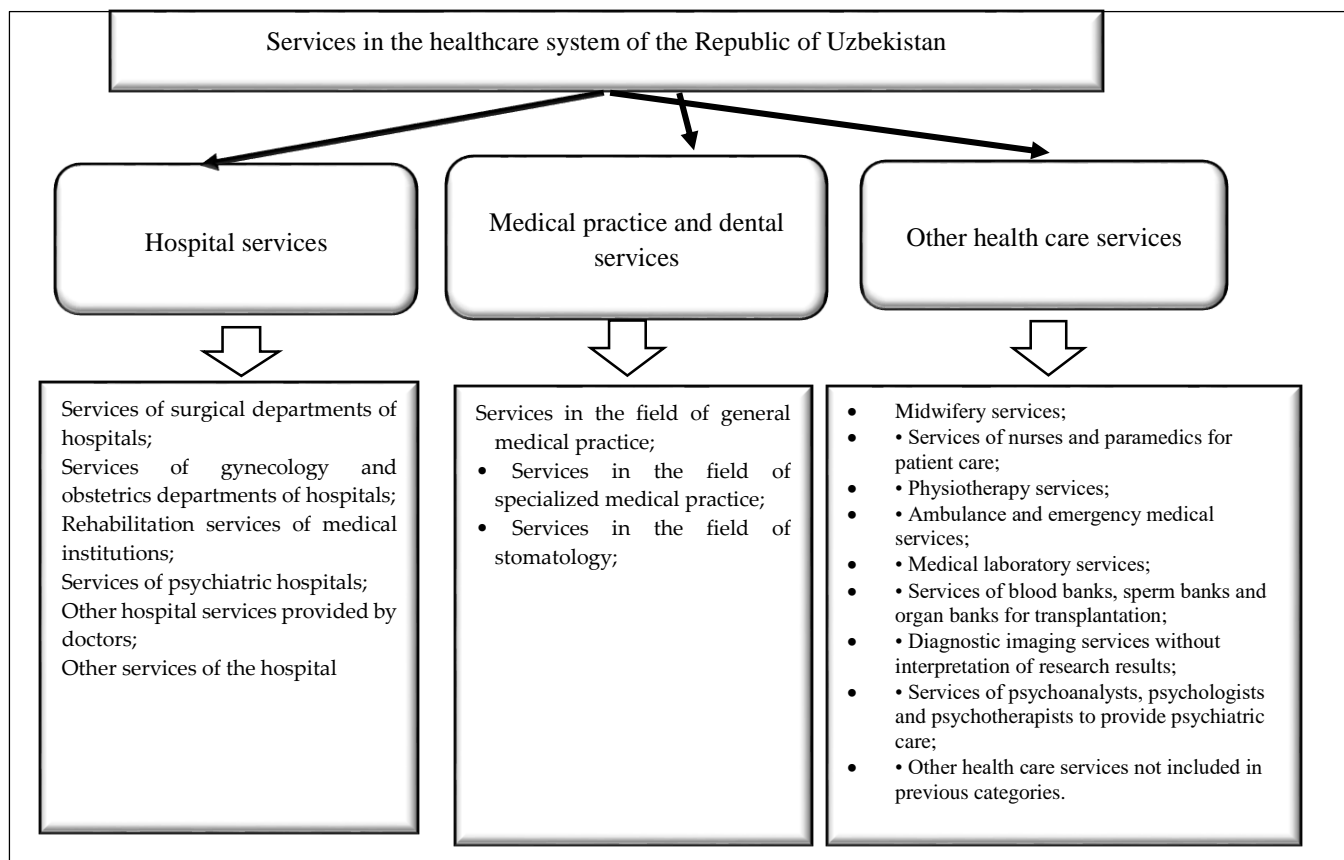

Figure 1.2 . Medical of services main types

Third to the group belonging to "Health to keep about another services" often medical entrepreneurship or public-private partnership based on displayed complex medical help and medical services to the composition incoming of services some types own into takes. Such services for the price this to services demand and offer effect it does services in the market work producers quality and efficiency on active work take go, the same at the time competitive advantages is creating and innovations and digital services current is doing. This classification statistics offices and republic health storage system requirements suitable will come and that's it with together globalization and medical of entrepreneurship development effect under this in the field happened happening changes account takes.

Summary by doing in other words, medical services a person life and health provide, of diseases prevention get and treatment as well as population life quality in increasing important importance occupation is enough. Theirs to himself special features, including cancellation by doing absence, relevance and information asymmetry, medical services show process organize reach and in management separately requires attention.

Medical services different criteria based on classification their diversity and many p edged showing gives. Shown service type, health storage segment, service show time, medicine employees qualified level and innovation level such as criteria medical services in classification important role plays.

in Uzbekistan medical services field develop their quality increase and commonality provide current task is considered. In this regard medicine institutions material and technical base strengthening, medical personnel preparation and qualification increase as well as medical services the market to develop separately attention focus necessary. New Uzbekistan conditions to the population good quality and efficient medical service show system create for health storage in the field reforms consistent continue to continue, advanced technologies current reach and international the experience learning important important have.
